This edition, released in 2008, updates previous datasets with expanded data, refined methodologies, and new land use categories.

The core purpose of the guide is to provide planners, engineers, and traffic analysts with average trip rates—typically expressed as trips per unit of development—so they can estimate the total daily, AM, and PM peak hour trips generated by proposed developments.

Key Features of the 8th Edition

- **Expanded Land Use Categories:** The 8th edition features over 200 land use classifications, including detailed subcategories, allowing for more precise estimates tailored to specific development types.
- **Updated Data Sets:** Incorporating new survey data from various regions, this edition reflects current travel behaviors and development trends.
- **Trip Generation Tables:** Organized in a user-friendly format, these tables provide average trips generated per unit (e.g., per 1,000 square feet, per dwelling unit).
- **Methodological Guidance:** The guide offers detailed instructions on how to select appropriate trip rates, apply adjustments, and interpret the data effectively.
- **Regional Adjustments:** Recognizes that trip rates can vary geographically, providing guidance on local adjustments.

How to Use the ITE Trip Generation Rates 8th Edition

Using the ITE Trip Generation Rates 8th Edition involves several key steps:

- **Identify the Land Use Category**

Choose the most appropriate land use classification that matches your project (e.g., "Office," "Fast Food Restaurant," "Multi-family Housing").

- **Determine the Appropriate Trip Rate**

Use the tables to find the average trips per unit for your land use and specific size or capacity of the project.

- Quantify Development Size

Establish the size or capacity of your project?square footage, number of units, seats, etc.?to apply the trip rate accurately.

- Calculate Trip Estimates

Multiply the trip rate by the development size to estimate total trips. For example:

$$\text{Estimated Trips} = \text{Trip Rate} \times \text{Development Size}$$

- Adjust for Local Conditions

Consider regional factors, site-specific characteristics, and operational considerations that may increase or decrease trip estimates.

- Apply Time-of-Day Distributions

Use the guide?s data on peak hour trips to analyze traffic impacts during specific periods.

Practical Example: Estimating Trips for a New Retail Center

Suppose a developer plans to build a 50,000 square foot retail shopping center. Here's how to estimate trips using the 8th edition:

- Step 1: Identify the land use category as "Shopping Center."
- Step 2: Find the average daily trip rate for "Shopping Center" in the tables?say, 20 trips per 1,000 sq ft.
- Step 3: Calculate total trips:

$$(50,000 \text{ sq ft} / 1,000) \times 20 \text{ trips} = 50 \times 20 = 1,000 \text{ trips per day}$$

- Step 4: Adjust for peak hours, regional factors, or other site-specific considerations if necessary.

This process provides a foundational estimate, which can then be refined through detailed analysis, local surveys, or modeling.
