Physics Serway Solution Chapter 24: An In-Depth Exploration

Physics Serway Solution Chapter 24 offers comprehensive insights into the principles of electromagnetic waves, their properties, and applications. This chapter is crucial for understanding the behavior of light and other forms of electromagnetic radiation, which are fundamental to modern physics and numerous technological advancements. In this article, we will delve into the key concepts, problem-solving strategies, and detailed solutions from Chapter 24, providing a thorough understanding suitable for students and enthusiasts alike.

Overview of Chapter 24: Electromagnetic Waves

Introduction to Electromagnetic Waves

Chapter 24 introduces the concept of electromagnetic waves as oscillations of electric and magnetic fields that propagate through space at the speed of light. These waves do not require a medium to travel, distinguishing them from mechanical waves. The chapter emphasizes their broad spectrum, ranging from radio waves to gamma rays, and explores their fundamental properties.

Key Properties and Characteristics

- **Speed:** All electromagnetic waves travel at the speed of light, approximately $(3.00 \times 10^8) \text{ m/s}$ in vacuum.
- **Wavelength and Frequency:** They are inversely related via the equation $(c = \lambda f)$, where (c) is the speed of light, (λ) the wavelength, and (f) the frequency.
- **Energy and Frequency:** The energy of photons associated with electromagnetic waves is directly proportional to their frequency, described by $(E = hf)$, where (h) is Planck's constant.
- **Polarization:** Electromagnetic waves can be polarized, meaning their electric field oscillates in specific directions.

Wave Behavior and Propagation

Reflection and Refraction

The chapter explains how electromagnetic waves behave when encountering different media.

Reflection occurs when waves bounce off surfaces, while refraction involves bending due to changes in speed as they pass through different media. Snell's law governs refraction, expressed as:

$$n_1 \sin \theta_1 = n_2 \sin \theta_2$$

where n_1 and n_2 are the indices of refraction of the respective media, and θ_1 , θ_2 are the angles of incidence and refraction.

Diffraction and Interference

Electromagnetic waves can also diffract around obstacles and interfere constructively or destructively, leading to phenomena such as diffraction patterns and interference fringes. These behaviors underpin technologies like holography and the operation of various optical instruments.

Solutions to Typical Problems in Chapter 24

Problem-Solving Strategies

When tackling problems in Chapter 24, consider the following approach:

- **Identify the given data:** Wavelength, frequency, wave speed, angles, or media properties.
- **Determine the required quantity:** Reflection angle, refracted angle, energy, or wave intensity.
- **Apply relevant equations:** Use wave relation ($c = \lambda f$), Snell's law, or wave interference principles.
- **Calculate and interpret:** Perform calculations carefully, maintaining unit consistency, and analyze the physical meaning of results.

Sample Problem 1: Refraction of Light

Problem: A light wave passes from air ($n_1 \approx 1.00$) into glass ($n_2 \approx 1.50$) at an incident angle of 30° . Find the angle of refraction.

Solution:

- **Given:** $\theta_1 = 30^\circ$, $n_1 = 1.00$, $n_2 = 1.50$
- **Apply Snell's Law:** $n_1 \sin \theta_1 = n_2 \sin \theta_2$
- **Calculate:** $\sin \theta_2 = \frac{n_1}{n_2} \sin \theta_1 = \frac{1.00}{1.50} \times \sin 30^\circ = \frac{1.00}{1.50} \times 0.5 = 0.333$
- **Find θ_2 :** $\theta_2 = \sin^{-1}(0.333) \approx 19.5^\circ$

Sample Problem 2: Determining Wavelength in Different Media

Problem: An electromagnetic wave with a wavelength of 600 nm in vacuum enters water ($n \approx 1.33$). Find its wavelength in water.

Solution:

- **Given:** $\lambda_0 = 600 \text{ nm}$, $n = 1.33$
- **Relationship:** $\lambda_{\text{medium}} = \frac{\lambda_0}{n}$
- **Calculate:** $\lambda_{\text{water}} = \frac{600 \text{ nm}}{1.33} \approx 450.9 \text{ nm}$
