Understanding the TR6 Wiper Motor and Its Wiring System

The Triumph TR6, a classic British sports car manufactured between 1968 and 1976, features a distinctive wiper system that is both functional and somewhat vintage in its design. The wiper motor in the TR6 is usually a single-speed unit with a dedicated wiring setup. Proper wiring is essential for ensuring that the wipers operate correctly, whether on intermittent, low, or high-speed settings.

Components of the Wiper Motor Wiring System

- Wiper Motor: The primary component that converts electrical energy into mechanical motion.
- Switch Assembly: Usually a multi-position switch controlling intermittent, low, and high speeds.
- Power Supply: Provides the necessary voltage, typically 12V DC in classic cars.
- Ground Connection: Completes the electrical circuit, usually connected to the vehicle chassis.
- Wiper Linkage and Blades: Mechanical parts driven by the motor, responsible for wiping the windshield.

Typical Wiring Diagram Overview

The wiring setup generally includes:

- A constant power wire from the battery or fuse box.
- A switch that directs power to the motor's different terminals depending on user input.
