- K-Factor: Typically between 0.3 and 0.5, depending on material and bend type.

Tip: Establishing these defaults early ensures consistency throughout your design process.

Step 2: Creating the Base Profile

The foundation of your sheet metal part is the base face or profile. You can create this via sketching:

Sketching the Base Profile

- Select the Create 2D Sketch tool on a plane (XY, XZ, or YZ).
- Use sketch tools such as Rectangle, Circle, or Polygon to define the shape.
- Dimension your sketch accurately, considering manufacturing constraints.

Converting Sketch to Sheet Metal

- Finish your sketch.
- Use the Face tool to select the profile.
- Click Create Flange to turn this face into a flange, which forms the initial sheet metal feature.

Step 3: Adding Flanges and Features

The core of sheet metal design involves adding flanges, bends, and features to shape your part.

Creating Flanges

- Select the face or edge where you want to add a flange.
- Click Create Flange in the Sheet Metal tab.
- Specify the Length, Angle (usually 90° or custom), and Position.
- Repeat for multiple edges or faces to build complex geometries.

Incorporating Bends and Reliefs

- Use Edge Flange for angled or curved flanges.
- Apply Bend Radius settings to simulate real-world bending.
- Add Relief Cuts or Jogs to accommodate material stretch and prevent cracking during bending.

Tip: Use the Bend Allowance feature to accurately predict flat pattern length.
