Sample Problem and Solution

To illustrate the concepts, here is a typical HAYT drill problem with a step-by-step solution.

Problem Statement

Given a circuit with a 12 V DC source, a 4 Ω resistor, and a parallel branch consisting of a 6 Ω resistor and a capacitor of 100 μ F, find the voltage across the capacitor and the current through it.

Solution Steps

Step 1: Recognize the circuit components and what is asked.

Step 2: Simplify the circuit:

- For DC steady-state, the capacitor acts as an open circuit.
- Therefore, the voltage across the capacitor is the same as the voltage across the parallel branch.

Step 3: Apply circuit laws:

- The resistor and the parallel branch are connected to the 12 V source.
- The current through the resistor is $(I_R = \frac{12V}{4\Omega} = 3A)$.

Step 4: Find the voltage across the parallel branch:

- Since the resistor is directly connected across the source, the voltage across the parallel branch is 12 V.

Step 5: Determine the capacitor voltage:

- The capacitor voltage in steady state is 12 V (since open circuit at DC).

Step 6: Find the current through the capacitor:

- At DC steady state, the capacitor current is zero (since it behaves as an open circuit).

Result:

- Voltage across the capacitor: 12 V
- Current through the capacitor: 0 A

Note: For transient or AC analysis, impedance calculations would be necessary, involving complex analysis as discussed earlier.

Conclusion: Mastering HAYT Drill Problems

Solving drill problems from Hayt's book requires a combination of understanding fundamental circuit laws, applying appropriate analysis methods, and practicing problem-solving techniques systematically. Practical Example: Solving a Simple Circuit Problem

Suppose a problem from Hayt involves finding the current in a circuit with a 12 V DC source, a resistor of 4 Ω in series with a 6 Ω resistor, and the task is to determine the current flowing through the circuit.

Step 1: Read the problem carefully.

Given: Voltage source (V) = 12V, Resistors R1=4 Ω , R2=6 Ω .

Required: Total current (I).

Step 2: Draw the circuit diagram.

(Simplified series circuit: Voltage source connected to R1 and R2 in series).

Step 3: Organize data.

Total resistance, $R_{\text{total}} = R1 + R2 = 4\Omega + 6\Omega = 10\Omega$.

Step 4: Apply Ohm's law.

$I = V / R_{\text{total}} = 12V / 10\Omega = 1.2A$.

Step 5: Verify.

The current flows through both resistors equally in series; the voltage drops are $R1I = 4\Omega \cdot 1.2A = 4.8V$ and $R2I = 6\Omega \cdot 1.2A = 7.2V$, summing to 12V, which matches the source.

Step 6: Present the answer.

The current flowing through the circuit is 1.2A.

This straightforward example illustrates the importance of systematic analysis, even in seemingly simple problems.

Problem 3: Dilution Calculation

Problem:

How much of a 3 M stock solution is required to prepare 500 mL of a 0.1 M solution?

Solution:

Step 1: Use the dilution equation:

$$C_1V_1 = C_2V_2$$

Where:

- C_1 = initial concentration = 3 M
- V_1 = volume of stock solution needed (unknown)
- C_2 = final concentration = 0.1 M
- V_2 = final volume = 0.5 L (500 mL)

Step 2: Solve for V_1 :

$$V_1 = (C_2 \times V_2) / C_1 = (0.1 \text{ M} \times 0.5 \text{ L}) / 3 \text{ M} = 0.0167 \text{ L}$$

Step 3: Convert to mL:

$$0.0167 \text{ L} \times 1000 \text{ mL/L} = 16.7 \text{ mL}$$

Answer:

Approximately 16.7 mL of the 3 M stock solution is needed, topped up with solvent to a total volume of 500 mL.

Problem 4: Converting Molarity to Percent w/v

Step 2: Mass of NaCl in 1 liter = moles $\times$ molar mass

$$= 2 \text{ mol} \times 58.44 \text{ g/mol} = 116.88 \text{ g}$$

Step 3: Percent w/v = (grams solute / 100 mL solution) $\times$ 100

- Since 1 L = 1000 mL,

$$\text{Percent w/v} = (116.88 \text{ g} / 1000 \text{ mL}) \times 100 = 11.688\%$$

Answer:

A 2 M NaCl solution is approximately 11.69% w/v.

Problem 5: Titration Calculation

Problem:

How many milliliters of HCl (0.1 M) are needed to neutralize 25 mL of NaOH (0.1 M)?

Solution:

Step 1: Write the neutralization reaction:

Step 2: Moles of NaOH:

$$= 0.1 \text{ mol/L} \times 0.025 \text{ L} = 0.0025 \text{ mol}$$

Step 3: Moles of HCl required = moles of NaOH (1:1 ratio): 0.0025 mol

Step 4: Volume of HCl solution needed:

$$V = \text{moles} / \text{concentration} = 0.0025 \text{ mol} / 0.1 \text{ mol/L} = 0.025 \text{ L}$$

Step 5: Convert to mL:

$$0.025 \text{ L} \times 1000 = 25 \text{ mL}$$

Answer:

25 mL of 0.1 M HCl is needed to neutralize 25 mL of 0.1 M NaOH.

Question What is the purpose of solving chemistry solution concentration practice problems? They help students understand how to calculate the concentration of solutions, such as molarity, molality, or percent composition, and improve their problem-solving skills in chemistry. **Answer** How do I calculate molarity given the amount of solute and solvent volume? Molarity (M) is calculated by dividing the number of moles of solute by the volume of solution in liters: $M = \text{moles of solute} / \text{liters of solution}$. What is the key step in converting grams of solute to moles for concentration calculations? The key step is to use the molar mass of the solute to convert grams to moles: $\text{moles} = \text{grams} / \text{molar mass}$. How do I determine the percent concentration of a solution? Percent concentration is calculated as $(\text{mass of solute} / \text{total mass of solution}) \times 100\%$, or for volume-based solutions, $(\text{volume of solute} / \text{total volume}) \times 100\%$. What are common mistakes to avoid when solving solution concentration problems? Common mistakes include using incorrect units, forgetting to convert grams to moles, mixing up volume units, or misapplying the formula. Always double-check units and calculations. How can I practice to improve my skills in solving solution concentration problems? Practice with a variety of problems, review step-by-step solutions, understand the underlying concepts, and use online quizzes or flashcards to

reinforce learning. What is the significance of the answer key in chemistry practice problems? The answer key helps verify your solutions, understand correct methods, and identify areas where you need further practice or clarification. Are there any online resources for free chemistry solution concentration practice problems with answer keys? Yes, websites like Khan Academy, ChemCollective, and educational platforms offer free practice problems along with detailed solutions and answer keys to aid learning.
